

Subject: Evolution or revolution - Thursday's Zoom session

So glad you joined us. I'm keen to help our Network appreciate the array of emerging technologies that are transforming EVERYTHING EVERYWHERE. The changes are vast, fast and bewildering EVERYONE.

The BIG question is how to regulate the digital economy's excesses and preserve humanitarian, liberal values. The SHOCK can no longer be deemed an evolution but rather a revolution...a form of anarchy that governments of all stripes are unable to grasp or contain.

A unique feature of the SHOCK is the promise of "personalization", that is – that the data being accumulated will be used in our personal/ individual service. With "uncertainty" coded into the algorithms, we will be assured that we will continue to learn, explore, innovate - though never at the rate of our robotic companions.

So welcome aboard as we live through and bear witness to a revolution more far reaching than ANYONE has anticipated. Those troubled by Covid in the short term or Climate Change in the mid-term are missing the very show that they are already living through.
